

SAMPLE ONLY. Stone Creek Heating & Cooling is a made-up shop. Every name, step and number below is invented for this demo.

Workflow Map, sample

Shop. Stone Creek Heating & Cooling (made up), residential HVAC, 6 people, southern New Hampshire

Process mapped. Missed call and lead intake through quote follow-up

Who touches it. Owner (prices and schedules), office (answers the phone when in), techs (out on jobs)

How it works today

#	Step	Who	Tool	Where it stalls
1	Call comes in	Office, or nobody	Desk phone, cell	When the truck is out, call goes to voicemail
2	Missed call follow-up	Owner or office	Voicemail, pad, callback	Some voicemails sit overnight. A few never get called back.
3	Web or email lead	Office	Website form, email	Leads sit in inbox until someone checks
4	Build the quote	Owner	Spreadsheet or handwritten	Done at night after jobs
5	Send the quote	Owner	Email or text	Same info typed again from the pad
6	Follow up	Whoever remembers	Nothing	Quotes go quiet. Nobody said no. They just never got asked again.

Where it leaks

1. Missed calls. In this sample, a couple of callbacks a week never happen. The lead went to voicemail and the pad got buried.
2. Scattered intake. Phone notes, web forms, and emails live in three places. Easy to lose one.
3. Quiet quotes. Roughly half the sent quotes get no second touch.

What I'd automate, ranked

1. **Missed-call text-back.** A missed call triggers a short text from the shop number: we saw you called, reply with what you need, and someone will get back. The lead also lands on one sheet. Owner or office still makes the real callback. Apps are the phone line they already have, a text tool, and a spreadsheet. Fits a One Workflow Build. **Fixed build price for this sample: \$499.**
2. **One intake list.** Web form and email leads drop into the same sheet on their own. Phone leads get typed into a four-box form on a phone. Nothing lives on a pad. Apps are email, a form, and a spreadsheet.
3. **Quote follow-up drafts.** Sent quotes get logged. On day three and day seven, a follow-up email gets written and parked in the owner's drafts. He sends it or deletes it. Nothing goes to a customer without him seeing it first.

What stays human

Pricing the job. Calling the customer back. Sending the quote. Deciding who gets on the schedule.

Tool options

Uses the phone, email, and spreadsheet the shop already has. Any new tool gets listed with the vendor's published price, and you check it before buying.

Rough hours saved (estimate for this sample, not a promise)

Automation	Guess per week
Missed-call text-back	About 1 hour, plus leads that would have gone cold
One intake list	1 to 1.5 hours
Quote follow-up drafts	About 1 hour, plus quotes that would have gone quiet
Total	About 3 to 4 hours

On a real Map I time your process as it runs today so you can check the numbers yourself. No ROI claim. Just the steps, the leaks, and a fixed price to build.

Price

Workflow Map, \$249, 3 business days, 1 revision.

One Workflow Build for #1 above (missed-call text-back), \$499, 7 business days. Fixed price set by this Map.

Connected Workflows, from \$1,200, if you want all three tied together later.
